Anyclue

We help
autoimmune
patients
understand their
own body, not
guess.

Lupus
Crohn's
Colitis
Hashimoto
Rheumatoid Arthritis

Company Name

UK alone has about 500,000 patients of Crohn's and Colitis

Think about your audience.

Some will already know about the project. Others will be hearing about it for the first time.

This is your opportunity to make sure everyone is on the same page.

Year/Quarter/Month

Problem:

- Autoimmune diseases are chronic, unpredictable, and highly individualized
- Lupus, Crohn's, Colitis
- Helplessness and no one to blame (Ate the same diet then why am I having joint pain)
- Poor doctor patient feedback loop
- Cognitive fog, fatigue, anxiety: Need smarter and frictionless ways to log

 Long-term management, not cure Potential dietary triggers or influencers Brain fog/fatigue = need for easy tracking Huge need for personal data → insight mapping Patients often feel unheard → tech can empower them

Solution

- Personalized and data driven learning:
not crowd based advice.

Crohn's & Colitis

Company Name			

- Temporal association problem.
- Multi-window analysis (e.g., 0–4h, 4–8h, 8–24h)

Bayesian Updates:

$$P(\text{symptom} \mid \text{food}) = (\alpha * \text{general_data} + \beta * \text{user_data}) / (\alpha + \beta)$$

Features

- Food item and quantity identification:
 - Capture before and after photos of food plate
 - Typed input
 - Voice inputs
- Symptoms recorder:
 - Typed input
 - Voice input
- Linking symptom with food and temporal aspect to come up with
 - Risky score for food items
 - Food item combinations to satisfy nutrient requirements
 - Symptoms likely to occur along with timeline on taking a risky food item.
- Closed-Loop Feedback System: Taking inputs from users what they think caused a particular symptom.
- Inputs from weather and sleep data (wearables)
- Share your data with your doctor and nutritionist.
-

Techniques

A decorative grid of light gray squares is located in the top-left corner. A large, colorful triangle with a gradient from red to yellow to green to blue is positioned in the top-right corner.

- Build user-specific Bayesian networks (Probabilistic graphs): Over time, the model gets smarter about what causes issues for you, not for the general population
- 
- Two large, thin white ellipses are drawn on the right side of the slide, overlapping each other.
